**DETAILED ACTION*****Response to Arguments***

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 9 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 10 of copending Application No. 11/564590. Although the conflicting claims are not identical, they are not patentably distinct from each other because the use of a discharge chamber surrounding the grinding plate is well known in the art and of no patentable merit.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,3-8,19 are rejected under 35 U.S.C. 102(b) as being anticipated by Riley. This patent shows a food disposer with a tangential outlet. Note the discharge chamber surrounds at least a portion of the grinding plate.

***Claim Rejections - 35 USC § 103***

Claims 9,20-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Riley in view of either Galbiati et al or Strutz et al. Riley does not use a BPM motor which results in a lack of benefits from using such a motor e.g. noise reduction. Both Galbiati et al and Strutz et al solve this problem by disclosing the use of BPM motors in similar apparatus. In order to obtain the inherent advantages of using such a motor, it would have been obvious for one of ordinary skill in the art to modify Riley by using a BPM motor, taught to be desirable by both secondary references.

Claims 1,3-8,19 are rejected under 35 U.S.C. 103(a) as being unpatentable over British in view of Riley. British discloses the basic food disposer except for the use of a tangential outlet which improves material flow movement. Riley solves this problem by disclosing similar apparatus including the use of a tangential outlet. In order to provide

Art Unit: 3725

for better flow movement, it would have been obvious for one of ordinary skill in the art to modify British by using a tangential outlet, taught to be desirable by Riley.

Claims 9,20-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over British in view of Riley as applied to claim 1 above, and further in view of either Galbiati et al or Strutz et al. See above for the use of Galbiati et al and Strutz et al.
